

Gardner's Killifish (*Fundulopanchax Gardneri*)

Distribution: Nigeria, Cameroon

Water temperature: 22-25 degrees Celsius

Max size: 2-3 inches

Ideal tank size: 30 litres for a pair in a species only tank or 65 litres and above in a community setup

A striking fish with many different colour patterns available. Peaceful and a great addition to a community aquarium. This fish is best kept in matched pairs, several pairs can be kept together in a larger aquarium.

They spend most of their time in the middle-top levels and floating plants serve well as cover. A well planted tank really shows off the colour of this species.

They eat a variety of smaller dried and frozen foods, such as daphnia, bloodworm, whiteworm, flakes and sinking pellets.
