

## Synodontis Rebeli (Synodontis Rebeli)

**Distribution:** Cameroon, Congo River

**Water temperature:** 22-25 degrees Celsius

**Max size:** 8-10 inches

**Ideal tank size:** 150 litres and above

An active fish that comes out to hunt for food in the evening. Due to its large eyes and long whiskers it can easily find the food/prey. One fish per tank is advisable as they like to be the boss and can be territorial. Small fish (less than 3 inches) should be avoided as they will be eaten!

They enjoy exploring so a variety of rocks, cave, bogwood and roots should be provided.

A varied diet of catfish pellets, flakes and frozen foods will keep this fish in the best condition.
